4 - Terminate Contacts

5 - Assemble Connector

5A Fit Spacer (d) onto Contact Block (b), bending wires smoothly and being careful not to damage wires.

Caution with crimp contacts:

Crimp contacts need extra space in the insulator, therefore they can move. **Never twist the cable and wires during the cable assembly;** this can apply too much force on the contacts.

5B Insert Block (b) into Connector Body (a).

5C Apply threadlocking adhesive on inner thread of Back Nut (f). Fit O-ring (e) into Back Nut (f) and close connector.

5B
Correct fit of
Spacer (d)

5D Ensure that Right Angle Body (c) is centred in Outer Sleeve of Connector Body (a) (gap on both sides) before tightening Back Nut (f).

5E Tighten Back Nut (f). Torque ≈ 1.3 Nm
Do not squeeze Connector Body in a vice to tighten Back Nut!

5F Confirm that Outer Sleeve of Connector Body (a) can move freely. If not, it can be released by holding Right Angle Body (c) and turning slightly Back Nut (f) counter-clockwise.

5G After the threadlocking adhesive has cured, check locking mechanism by mating connector with counterpart and pulling on Right Angle Body (c) in unmating direction. The connector should stay mated. Pull on Outer Sleeve of connector. It should unlock and disconnect.
