## COMPLIANCE STATEMENT REGARDING Regulation (EU) 2019/1021 for Persistent Organic Pollutants (POPs)

According to European Chemicals Agency (ECHA), persistent organic pollutants (POPs) are organic substances that persist in the environment, accumulate in living organisms and pose a risk to our health and the environment. They can be transported by air, water or migratory species across international borders, reaching regions where they have never been produced or used.

European Chemicals Agency (ECHA) does provide a list of 309 unique substances, subject to prohibition, restrictions, and waste management. More information: <https://echa.europa.eu/list-of-substances-subject-to-pops-regulation>

Fischer Connectors hereby certifies that, to the best of its knowledge, its products\* do not include any POP, from ECHA list (last updated 11<sup>th</sup> of August 2023).

December 2023

E. Carli

QHSE Director

\*Materials for specific cable assemblies manufactured outside of our Fischer Connectors European and Swiss facilities and any materials and items provided by customers for the specific production of custom assemblies are not assessed by Fischer Connectors for POPs.
