Recommendations regarding Storage conditions

Dear valued customers,

Fischer Connectors products may contain O-Rings and other elastomeric components. Storage conditions at customer's location are critical for maintaining their performance over the long term.
For this reason, we do not provide official shelf-life statement.
We recommend that the following points be considered when storing our products:

- The storage area should be kept cool, dry, dust free, and moderately ventilated,
- The temperature should be between +5 and +40 °C (+41 and +104 °F),
- The average humidity level should be between 40 and 65%,
- Products should be protected from radiation and light sources emitting UV rays,
- Solvents, fuels, lubricants or cleaning agents should not be stored in the same area.

When these conditions are fully respected, Fischer Connectors is confident that its products can still be used after a storage period up to 5 years from the date of purchase. Please note that, in all cases, the product warranty remains limited according to our Sales Conditions.
